

DETALYS

COMPUTER DIAGNOSTICS

Easily gather system, battery, keyboard, screen & computer diagnostics into your ERP system.

- **Processor** - Designed to vigorously test your machine's CPU by testing a large subset of operations for each supported family of processor commands, including all registers and areas of the processing unit.
- **Battery** - Diagnose old/damaged batteries before they fail.
- **USB Ports** - Helps determine the functionality of all USB-1, USB-2, USB-3, and USB-C type ports found on the device.
- **Storage** - Tests a hard drive's read and write capabilities and will also query the hard drive for its overall SMART health status.
- **Network** - Will detect and test all network interfaces. Requires either a physical Ethernet connection, or Wi-Fi to be pre-configured.
- **Display** - Interactive display tests will identify stuck/dead pixels in the screen or monitor.
- **Mouse** - Interactive test check all major functions of the device's mouse.
- **Keyboard** - Two interactive tests designed to access all major parts of the keyboard.
- **Memory** - Test the storage capability and accuracy of the available RAM in the system.
- **WebCam** - Test cameras current state and the webcam's picture quality.
- **Speaker and Microphone** - Test the audio playback and capture capabilities.
- **Audit Logs** - Log types include XML, JSON, PDF, Text and HTML files. Log destinations include SQL, Network Share, FTP, USB, email, and HTTP
